

## Self-assess our work qualitatively

First of all, we believe we have surpassed the expectations imposed for the distinction grade (7-8). We have developed a calculator that uses variables, although it requires the use of brackets to maintain the correct order of operations. This project has demanded a significant amount of effort and dedication, and it has not been an easy task.

Throughout the development process, we encountered numerous challenges that required innovative problem-solving and a deep understanding of programming concepts. We had to research extensively, test different approaches, and refine our code multiple times to ensure the calculator functions accurately and efficiently.

Given the complexity of the task and the amount of work we have put into it, we believe that while we may not be suitable for an excellent grade, we do deserve a distinction grade. Our project demonstrates a solid grasp of the required skills and a commitment to producing high-quality work.
